Verify Legal Documents with Cryptographic Integrity

Ensure authenticity using SHA-256 hashing and digital signatures.
Protect yourself from document fraud and tampering.

Verify Document

Verify Your Document

Upload your document and verify its authenticity using cryptographic validation

Drop your document here

or click to browse from your computer

Supports PDF, DOC, DOCX files

Document ID (Optional)

Enter document reference ID

Issuer Name (Optional)

Enter issuer organization

How It Works

Our verification process uses industry-standard cryptographic techniques to ensure your documents remain authentic and tamper-proof.

1

Upload Your Document

Select and upload the legal document you want to verify.
We support **PDF, DOC, DOCX** formats for maximum compatibility.

PDF DOC DOCX

Your document is processed securely and is never stored on our servers.

Generate Cryptographic Hash (SHA-256)

The system generates a SHA-256 cryptographic hash — a unique digital fingerprint of your document.

Why it matters: Even a single character change will produce a completely different hash, ensuring tamper detection and document integrity.

```
Example: a3f5e7b2...9c4d1a8f
```

2

3

Verify Digital Signature (ECDSA)

The generated hash is verified using ECDSA digital signatures issued by authorized LGU personnel.

- Document Authenticity — Confirms the document is genuine
- Authorized Signer — Verifies the LGU official who signed
- Signing Timestamp — Records when the signature was created
- Key Validity Status — Ensures the signing key is active

Display Verification Result

The system instantly displays the verification result, indicating whether your document is authentic and untampered, or if issues were detected.

Verified — Document is authentic

Invalid — Document was modified

Expired Key — Signing key expired

No registration required • Instant results • Free for all citizens

About Parity

Parity is a government-backed document verification platform that leverages cutting-edge cryptographic technology to ensure the authenticity and integrity of legal documents. Our mission is to eliminate document fraud, provide instant verification capabilities, and establish a trusted digital infrastructure for official records. Built with military-grade security and designed for ease of use, Parity serves citizens, businesses, and government agencies in the fight against document tampering and forgery.

Technology Used

SHA-256 Hashing

A cryptographic hash function that produces a unique 256-bit fingerprint for each document. Even a single character change produces a completely different hash.

Digital Signatures (ECDSA)

Elliptic Curve Digital Signature Algorithm ensures that only authorized government offices can register documents in the system.

Secure Infrastructure

Government-managed servers with military-grade encryption and redundant backups ensure system availability and data integrity.

Audit Trails

All system actions are logged with immutable timestamps for complete transparency and accountability.

Data Privacy and Compliance

Parity is fully compliant with the Data Privacy Act of 2012 (Republic Act No. 10173). The system is designed with privacy-first principles:

Our Privacy Principles

- Only cryptographic hashes are stored in the system—never the actual document content
- No personal information is required to verify a document
- All data is encrypted both at rest and in transit using AES-256 and TLS 1.3
- Access to verification records is strictly restricted to authorized personnel only
- Citizens have the right to request and audit logs of all access to their document records

Certified by the National Privacy Commission (NPC)
